## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Sugo (US 5,076,467).

Sugo shows the structure claimed including a steam-generating portion having a boiler with an electrical heater to produce the pressurized steam and an electromagnetic valve through which the steam is sent to a connecting tube.

### *Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sugo (US 5,076,467) in view of Yamaguchi et al (US 5,803,938).

Sugo shows the structure claimed except a pressure-reducing valve disposed on a steam passage between the boiler and the electromagnetic valve.

Yamaguchi et al shows a pressure adjuster (31) disposed between the vaporization chamber and a steam outlet valve. In view of Yamaguchi et al, it would have been obvious to one

Art Unit: 3742

of ordinary skill in the art to adapt Sugo with a pressure reducing or adjuster valve to further control the rate at which the steam is generated and sent to the steam outlet valve including the electromagnetic valve.
